1. INTRODUCTION

This HDBaseT 2.0 Receiver is a great solution for receiving uncompressed HD audio and video as well as Ethernet and control via a single run of Cat.5e/6/7 cable over distances of up to 100 meters. Multiple data and control signal types are supported, including USB 2.0, IR, RS-232 and LAN connections. An independent balanced analogue stereo audio output is also provided to support easy audio signal extension from compatible Transmitters. The HDBaseT input supports receiving resolutions up to a maximum of 4K@30Hz (4:4:4, 8-bit) or 4K@60Hz (4:2:0, 8-bit) from a compatible HDBaseT Transmitter.

When paired with this unit's standard Transmitter, 2 switchable USB 2.0 host (Type B) connections are available (1 on the Transmitter, 1 on the Receiver) which can connect to devices on up to 6 USB 2.0 (Type A) ports (3 on the Transmitter, 3 on the Receiver) forming a highly flexible KVM extension configuration (Note: Only 1 USB host may be active at a time).

This Receiver (PSE) can provide PoH (Power over HDBaseT) power to the connected HDBaseT Transmitter (PD) (compatible Transmitters only), allowing for greater flexibility within different installation scenarios. This unit is controllable via a front panel button.

6. OPERATION CONTROLS AND FUNCTIONS

6.1 Front Panel

- ① **POWER LED:** This LED will illuminate to indicate the unit is on and receiving power.
- ② **LINK LED:** This LED will illuminate solidly when a live connection with a compatible Transmitter is active.
- ③ **USB 2.0 (Type A) Ports:** Connect directly to standard USB 2.0 peripherals such as a mouse, keyboard or flash drive to extend their USB functionality to the designated Host Port.
- ④ **USB SELECT Button & LED:** Press this button to toggle between the USB Host Ports on the Receiver or compatible Transmitter. The LED will illuminate to indicate which USB Host Port is currently active. If the LED is off, the USB Host Port on the connected Transmitter is active.

Note: Changing the USB host will force the HDBaseT connection to briefly disconnect while it reconfigures. The connected host (PC, laptop, etc.) may also take a moment to detect all available devices.

USB 2.0 (Type B) Port: Connect directly to a standard USB host such as a PC or laptop to extend its USB functionality to all currently connected USB devices.

Note: Multiple USB hosts may be connected at once (up to 2 total, between the Tx and a compatible Rx unit) with a single selected host active at a time

6.2 Rear Panel

- 1 **DC 24V Port:** Plug the 24V DC power adapter into this port and connect it to an AC wall outlet for power.
- 2 **SERVICE Switch:** This switch is reserved for factory use only. The default setting is "OFF".
- 3 **BYPASS RS-232 Terminal Block:** Connect to a PC, laptop, or serial controllable device with a 3-pin adapter cable for the extension of RS-232 signals between both ends of the HDBaseT connection.
- 4 **IR OUT Port:** Connect to the provided IR Blaster to transmit IR signals from the other end of the HDBaseT connection to devices within direct line-of-sight of the IR Blaster.
IR IN Port: Connect to the provided IR Extender to receive IR control signals and extend them to devices connected to the other end of the HDBaseT connection. Ensure that the remote being used is within direct line-of-sight of the IR Extender.
- 5 **CAT 5e/6/7 IN Port:** Connect to a compatible HDBaseT Transmitter with a single Cat.5e/6/7 cable for reception of all data signals. PoH will also be supplied to a connected compatible PD Transmitter.
- 6 **HDMI OUT:** Connect to HDMI TVs, monitors or amplifiers for digital video and audio output.
- 7 **Analogue OUT Terminal Block:** Connect to powered speakers or an amplifier for balanced analogue stereo audio output. This will output the independent audio channel sent by compatible HDBaseT Transmitters.
- 8 **LAN Port:** Connect to an Ethernet supporting device or to your local network, as appropriate, to extend the network to both ends of the HDBaseT connection.
